

Versatility at it's best

Snugseat Spring

The postural control system designed to enhance the sitting position of your child.

The Snug Seat postural control system is the result of intensive research by biomedical and rehabilitation engineers and consultation with paediatric occupational therapists and parents.

The Snug Seat's modular design means it can be easily adapted, by making use of the extensive range of adjustable pads, to the growing child's changing dimensions and needs. The seat itself is supported in a strong frame which can be attached to a buggy base for easy manoeuvrability.

It also offers a range of seating positions for study, eating, sleep, relaxation or play; conforming to The Medical Devices Directive.

The Complete Snugseat System consists of: Seat Frame and Shell, Set of Modular Pads, Height, Width and Depth Adjustable Pommel, Height and Depth Adjustable Footrest, Machine Washable Cover Set, Adjustable 5 Point Harness, Adjustable Gas Spring and a Buggy Base with Spring Suspension.

The Snug Seat is available in three sizes; Nursery, Junior and Senior, thus ensuring that the correct seat is selected for the child's body weight and frame size. Like any conventional pushchair the Snug Seat is available with a comprehensive range of accessories.

When used as a car safety seat, the seat section has been successfully impact tested to ECE Regulation R44.

The Snug Seat can be detached from its buggy and placed on an indoor frame for ease of use around the home or at school. It provides maximum stability even when in tilt and its lightweight frame and wheels means it can be easily manoeuvred from room to room.

The Snug Seat has been successfully crash tested in accordance to ISO 7176/19 and therefore ensures safe transportation of the child in specially adapted vehicles.
